

Electric Boot Openers

Abiliquip has a product to power the opening of your vehicle boot or hatch.

Reasons why you may find this helpful:

- Some boots are very high to reach and pull down
- Some boots open quickly or require stepping backwards, and can upset your balance.
- Ideal for people not very stable on their feet.

Very few vehicles have the option of manufacturer-supplied electric openers.

We can source these where they exist, but do make our own to suit any vehicle.

For limited mobility people these offer:

- Lower risk of injury
- Ease of use
- Convenience
- Wireless keyfob option
- Vehicle battery powered

This can be combined with other aids to improve mobility further.
